

GARNEA a.s. named as the official Czech dealer of Trombia Sweepers

Waterless PM2,5 and PM10 dust removal sweepers launched in Czech Republic

Finnish high-end sweeper attachment manufacturer Snowek Oy has named GARNEA a.s. as the official dealer of PM2,5 certified Trombia sweepers in Czech Republic. Trombia is the world's first and only waterless sweeper attachment proven to deliver similar sweeping results and PM2,5 dust removal capabilities as the highest calibre of city suction sweeper vehicles. Since introduction in Finland in 2016, Trombia sweepers have now been launched in total of seven countries and Snowek continues the expansion in Europe and North America during the early 2020.

Trombia sweeper attachments exploit wheel loaders in year-round street and area maintenance, and assist public and private sector to sweep and collect away the finest dust particles and at the same time optimize their fleets' idle time. Trombia sweeper attachments have been designed to be completely filter-free by using a globally patented technology combining air-knife dust cleaning, mechanical sweeping, vacuum and cyclone separation. Inside Trombia's sweeping chamber the sweeping process is carried out fully waterless, which enables contractors to clean and sweep with higher accuracy and perfection in sweeping result.

"With the rising public debate around street dust challenges in Czech Republic it has been fantastic to start working with GARNEA a.s. as the official dealer in the market. We are together providing solutions for Czech municipalities and industrial sites combating dust challenges as well as carrying out their day to day sweeping tasks. The sweeping performance of Trombia has already convinced the first customers and we are very much looking forward to working with the GARNEA and deliver Trombia across the country"

Antti Nikkanen, CEO, Snowek OY

For municipalities, industrial plants and sweeping contractors Trombia attachment is a solution for both heavier debris, sand and millings as well as fine dust removal with fully dry surfaces year-round. Saved time in water refills and optimizing machinery fleets increases sweeping efficiency year-round. Investment costs for Trombia sweeper attachments are marginal compared to the likes of self-propelled city sweepers with similar-level fine dust sweeping capabilities.

TROMBIA

”Cooperation with SNOWEK OY is big opportunity for us, because we want to offer products that are efficient, high quality and can really represent values of our company. It’s obvious that environmental requirements are becoming increasingly important and industry companies must deal with them. With Trombia, we are prepared to offer the best possible solution for them.”

Václav Baštýř, Garnea a.s.

SNOWEK OY. is a 2011-founded privately-owned developer of high end road maintenance solutions. The company designs, manufactures and markets work equipment for wheel loaders, tractors and excavators in particular for dust and snow removal and street sweeping. Company headquarters is based in Kuopio, Finland.

GARNEA a.s. is a family company founded in 1992. GARNEA has been distributing and servicing construction machinery across Czech market since 2002 and are currently the official distributor of DOOSAN construction equipment as well as Deutz-Fahr and Yanmar agricultural machines. The headquarters is based in Dolni Bukovsko, Czech Republic
